(Only with output type 3 and up to 13 bits Gray code available)

Normal operation:

Rising code values when shaft turning clockwise (cw). Falling code values when shaft turning counterclockwise (ccw)

Reverse operation:

Output MSB inverted (pin 16) instead of output MSB (pin 3) connected. Falling code values when shaft turning clockwise (cw). Rising code values when shaft turning counterclockwise (ccw), top view of shaft.

Dimensions shaft version:

Clamping flange with shaft $\varnothing 10$

Synchronous flange with shaft $\varnothing 6$ mm

Mounting advice:

The flanges and shafts of the encoder and drive should not both be rigidly coupled together at the same time! We recommend the use of suitable couplings (see Accessories section).

Dimensions:

Standard Type 5852 (Shaft) / 5872 (Hollow shaft)

Dimensions hollow shaft version:

Note: minimum insertion depth 1.5 x D_{hollow shaft}

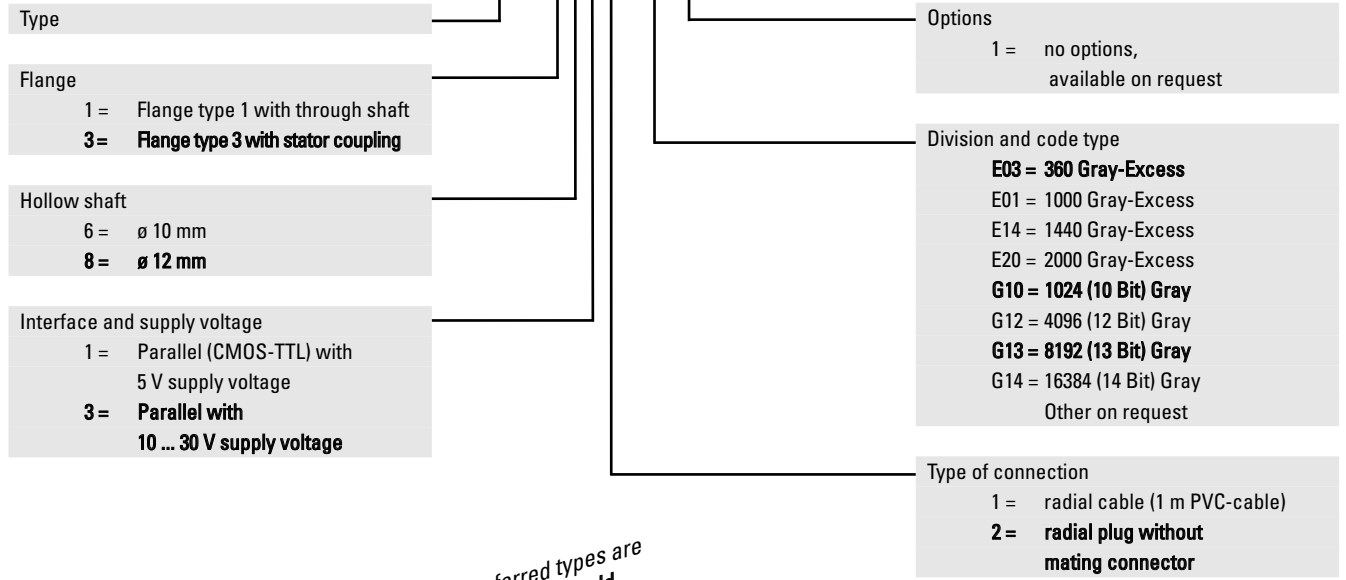

Mounting advice:

- 1) The flanges and shafts of the encoder and drive should not both be rigidly coupled together at the same time.
- 2) Mounting a hollow shaft encoder, we recommend using a torque stop pin or a stator coupling.
- 3) When mounting the encoder ensure that the dimension L_{min.} is larger than the maximum axial play of the drive. Otherwise there is a danger that the device could mechanically seize up.
